

Decision_4: A fire hydrant can cover a 500 metres range, figure out how much is needed to upgrade the pitches that are not covered by fire hydrants.

Decision_7: Top level nested question: Find which site costs more to convert current ground surface to multi-surface.

caravan sites

Decision_6: Middle level nested question: Find the zone that is the most costly to convert the ground surface types to multi-surface.

parking zones

Decision_1: For pitches that are below average elevation for all the pitches in the 2 sites, an upgrade to the drainage system is suggested. Figure out the cost to build drainage trenches around the pitches' perimeter below average elevation.

Decision_2: For the purpose of marketing, find the economic pitch with shared drinking water hoses and calculate the profit these pitches made from the most recent month.

Desicion_3: Find the mostly visited premium pitches from the most recent month and investigate the facility status of these pitches. How much will it cost to upgrade the shared facilities to private?

Decision_5: Base level nested question: It is needed to convert the ground surface types to multi-surface for all pitches in order to provide better service. Calculate the average and total costs to accomplish this

pitches
